XLR MALE OUTPUTS
from DB-25 Channel 7 & 8
Pass Through

XLR FEMALE INPUTS
to DB-25 Channel 7 & 8
Pass Through

COMPRESSOR LINKING:

By default, all compressors are linked together in the 6B lunchbox using wire jumpers on the circuit board assembly. If the compressor module is not fitted with a "link" switch on the control panel and compressor linking is not desired, these jumpers must be removed in order to disable the feature. The 527 and JDK V12 compressors both have built-in "link" switches.
